

Benefits Statement

Established in 2010, Cedar Revive has grown into becoming the only dedicated provider of deliciously nutritious consultancy catering and housekeeping solutions in the Senior Living and Child Care sectors in Scotland, including a specialist dementia service. We also provide a dedicated food delivery service from our Scottish suppliers, delivering fresh raw ingredients daily.

It's important during these challenging times we support clients and cooks while delivering nutritious menus that control costs. We are very proud to report our clients and chefs have stated that our Chef Managers Manual has helped them to achieve their financial targets, along with using the Cedar Revive recipe database.

Benefits of Our Service

Many of the benefits of the Cedar Revive services can be seen and felt immediately, as the moral and mental state of staff and residents alike dramatically improves. The happiness seen in the residents we serve comes from an improved service, which in turn makes our client's care facilities a more attractive prospect.

The statistical improvements to our client's bottom lines are also very clear to see, with savings such as:

- **An average of 35% reduction in weekly food & sundries cost, as a direct result of our procurement system and menu planning.**
- **An average of 20% savings on staff costs, as a direct result of the processes implemented and improved welfare of residents.**

However, the total benefits and savings felt as a direct result of our services include a lot more. When we achieve both healthier and happier residents, more efficient and manageable menus, and a more cost effective service, it allows our clients to focus on higher quality of care. It may seem off at first sight, but very simply - higher levels of care and nutrition = a more cost efficient organisation, as your residents become more self-sufficient.

It is always our goal that our service cost is at the very least cancelled out by the savings and additional income made by our clients.
